Question No 2:-

```
Function SumDivisors(x)
    declare i,sum
      sum=0
    for   i=1  to x/2
        if x%i==0
            sum = sum +i
    return sum
EndFunction

Begin
Declare n,a,b, pairs, ok
   pairs =0
   ok=0
     while ok ==0
        print ("Enter n:", n)
      • if n>=1
            ok =1
    print "Amicable pairs upto n: "
    for a=2  to n
       b = sumDivisors(a)
       if b>a  AND  b<=n  AND sumDivisors(b)==a
            print "(a,b)"
            pairs =pairs +1
     if pairs==0
        print "No amicable pairs found upto n."
     else
       print " Total pairs: " and pairs
End
```
